**Short description of project**

The proposed agri-environmental development program draft of “Program for sustainable development of family farms in Baranja” consists of three main parts; description and analysis of present situation, proposal plan of real development possibilities and measures for long-term implementation.

**Description:**

**Short description of the task performed by Croatian partner (Faculty of CE)**

The Faculty of Civil Engineering Osijek was responsible for around 20% of activities, including attending of coordination meetings, preparation of necessary materials and papers, planning activities, scouting of interesting traditional construction in Baranja, producing plans and studies of them, and responsible for its part of field activities (lectures within seminars, workshops and round tables planning and attending, student excursions). The transfer of expertise was on high level through coordination meetings and lectures. These activities served as an excellent mean of transferring knowledge toward other project partner staff. Through coordination meetings (at least one per week) and frequent phone calls and e-mail
communications with project leader, other team leaders and team experts from other partners (almost daily) our opinion is that we reached overall high level of coordination.
