Short description of project
Description: There are certain barriers that hamper the desired progress of the faculties, such as a slow change of curriculum in comparison with fast change of information technology (IT) and the change of economic system towards a global Internet economy. The main consequence is the necessity of a permanent update of the reaching curricula, in both fields of information science and business administration, towards a lifelong education. Croatian institution
participating in this project provide solid educational basis and have educated teaching staff, but improvements in the contemporary knowledge can be made. Due to the fast change of the IT and its growing influence on the modern society, there are great needs for change, improvement and update of teaching process. Student can choose between different programs depending on their interests. The wider object of the project is to provide students in the region with appropriate education which is targeted towards the fast changing needs of the IT and economic environment and to provide collaboration among universities in the region.

**Short description of the task performed by Croatian partner**

To improve undergraduate curricula, teaching methods, teaching materials, laboratory and library facilities at the faculties mentioned above.

Improvement specific undergraduate curricula in following domains:

- In the field of information sciences at FOI, Faculty of Philosophy in Rijeka and Faculty of Philosophy University of Zagreb
- In the field of economics science at the FOI and Faculty of Economics in Osijek
- In the field of quantitative methods undergraduate courses at all faculties participating in project
